

Question bank for FYJC IT Arts, Science and Commerce

NOTE :

1. The question bank is only a guideline
2. The question bank is not exhaustive and the student is also expected to read the chapter from the government textbook, since questions could be framed in a different way

Chapter 1 : Basics of Information Technology

Fill in the blanks

1. All work places are being _____ and the use of IT is being enhanced
2. The full form of ICT is _____
3. Information is data _____ in a manner that can be used by human beings in a significant way
4. _____ can be any character, text, word, number
5. The word "Computer" is derived from the latin word _____
6. The full form of ALU is _____
7. The full form of MICR is _____
8. ROM is called as _____ memory
9. A group of 4 bits is called as _____
10. A group of 8 bits is called a _____
11. 1 KiloByte (KB) = _____ Bytes.
12. 1 Gigabyte (GB) = _____ MegaBytes.
13. FOSS stands for _____
14. _____ software releases code in public domain for anyone to use
15. _____ software has a closely guarded code
16. _____ is one of the most popular Linux distribution
17. A _____ is a set of rules that governs communication between computers on a network
18. The full form of TCP/IP is _____
19. The full form of DHCP is _____

20. The full form of IRC is _____
21. The full form of HTTP is _____
22. The full form of IMAP is _____
23. The full form of WAN is _____
24. The full form of SMTP is _____
25. The full form of GUI is _____
26. The full form of CLI is _____
27. _____ is a global network connecting millions of computers.
28. _____ is a design of a computer network

True or False

1. Distance is not an issue while accessing information
2. Medical transcription is an example of ITES
3. There is no difference between data and information
4. Computer architecture does not specify the interaction of software with hardware
5. Linux is not customizable
6. Anti virus software may not be reliable
7. Computer hardware is a computer program
8. Linux does not support GUI
9. Hard disk is the primary memory of a computer
10. ALU is a part of CPU
11. The information in the ROM is lost when the power is switched OFF
12. Touch screen is an output device
13. Blackberry is an open source operating system
14. A server computer stores all resources required by end users
15. ARPANET is the internet which we are using today
16. POP3 maintains a copy of the email on the server
17. There is always a scope for updating, improving open source software
18. Computer storage is measured only in Gigabytes
19. Bluetooth is an example of peer-to-peer network for sharing files.
20. A peer to peer has a dedicated server
21. Software refers to how a computer system is designed and how it works.

Choose single correct answer

1. The _____ coordinates tasks between various components of a computer system

- Arithmetic and Logic Unit
 - CPU
 - Control Unit
 - Storage device
2. The main function of _____ is to direct commands and data in the computer
- RAM
 - CPU
 - Input unit
 - Output unit
3. _____ is the delivery of computing services over the internet
- Green computing
 - Cloud computing
 - Personal computing
 - Internet of things
4. _____ is used for receiving e-mail from remote servers
- SMTP
 - FTP
 - POP3
 - IRC
5. _____ is demonstrated by machines similar to intelligence displayed by humans
- Machine learning
 - Block chain
 - Artificial intelligence
 - Data Analytics
6. _____ consists of a collection of computers, printers that are connected together so that they can communicate with each other
- Computer collection
 - Computer network
 - Computer design
 - Computer storage
7. The _____ is responsible for coordinating tasks between all computer components
- ALU
 - Input unit

- Memory
 - Control unit
8. The _____ is a term used to describe computer programs
- Programming
 - Software
 - Programming language
 - Computer programming
9. _____ is an operating system registered by Apple corporation
- Chrome OS
 - Mac OS
 - Unix
 - Linux
10. The GUI of Linux is known as _____
- Linux GUI
 - Gnome
 - Dashboard
 - File explorer
11. _____ translates network address into human readable names
- DHCP
 - DNS
 - POP3
 - SMTP
12. _____ software has paid propriety rights with developers
- Application
 - System
 - Open source
 - Closed source
13. _____ is a subset of Artificial intelligence
- Big data
 - Block chain
 - Machine learning
 - Data analytics
14. The default CLI on Ubuntu 18.04 is called _____
- Hash
 - Bash

- GNOME
- GIMP

15. The software which releases code in public for anyone to use is _____ software

- Closed source
- Open source
- System
- Application

16. UNIX has been trademarked by _____

- Google
- Apple
- AT&T bell labs
- Microsoft

17. While working with _____, the user must know the method to enter commands

- Mac OS
- Windows 7
- DOS
- Windows 8

18. In Linux, the root directory is written as _____

- %
- =
- //
- /

19. The _____ directory in Linux stores system configuration files

- /bin
- /etc
- /home
- /proc

20. The _____ directory in Linux stores all connected devices

- /bin
- /etc

- /dev
- /proc

21. The _____ directory in Linux stores all essential system programs

- /bin
- /etc
- /dev
- /home

22. The _____ directory in Linux indicates how much RAM is free

- /etc
- /bin
- /proc
- /tmp

23. The World Wide Web (WWW) was invented by _____.

- Robert Kahn
- Vinton cerf
- Tim Berners-Lee
- Robert Cailiau

Answer in brief

1. What are the feature of closed source software ?
2. State the functions of the operating system
3. State the goals of Green Computing
4. List the three decisions required to be taken by information
5. Write a short note on primary memory
6. Which are the 5 major operations of a computer system
7. Define the term computer
8. List the advantages of Linux
9. Differentiate between RAM and ROM
10. List the various secondary storage / memory devices
11. Write a short note on computer architecture
12. Explain bit, nibble and byte

Choose TWO correct answers

1. The protocols used for receiving emails from servers are _____ and _____
a) IMAP b) HTTP c) POP3 d) FTP
2. The scientists responsible for developing TCP/IP are _____ and _____
a) Tim Berner Lee b) Robert Kahn c) Charles Babbage d) Vinton Cerf
3. Features of WAN are _____ and _____
a) High speed b) easy to setup c) expensive d) covers small area
4. RAM is also called _____ and _____
a) Volatile b) non volatile c) primary d) secondary
5. Functions of a control unit are _____ and _____
a) Collects data from input units b) stores data in memory c) performs logical functions d) transmits processed data to output units
6. A block chain can be defined as _____ and _____ ledger
a) Distributed b) single c) decentralized d) centralized
7. Machine learning is a study of _____ and _____ that computers use to perform a specific task
a) Business models b) statistical models c) algorithms d) hardware

Answer in brief

1. Data and information
2. Arithmetic and Logic unit
3. Computer
4. Hardware
5. Software
6. RAM
7. Open source software

8. System software
9. Computer network
10. Network architecture
11. IT enabled services
12. DHCP
13. Protocol
14. Cloud computing
15. ARPANET
16. Server and client

Match the columns

Column A	Column B
1. 8 bits	a. Operating system
2. MICR	b. Computer network
3. Windows 11	c. 1 byte
4. LAN	d. Input device

Match the columns

Column A	Column B
1. Machine learning	e. Department of defense
2. Internet	f. Recent trend in IT
3. ARPANET	g. Computer network
4. LAN	h. Collection of networked computers

-----x-----x-----x-----

Question bank for FYJC IT Arts, Science and Commerce

NOTE :

1. The question bank is only a guide line
2. The question bank is not exhaustive and the student is also expected to read the chapter since questions could be framed in a different way

Chapter 2 : Introduction to DBMS

Fill in the blanks

1. _____ is a collection of interrelated data
2. _____ is a collection of raw facts
3. Information is _____ data
4. The full form of DBMS is _____
5. A _____ provides a user, a systematic way to create, retrieve data
6. _____ is a software for creating and managing databases
7. There are various levels of _____ to access the data in a database
8. Multiple copies of files can lead to _____
9. _____ means that the data is accurate and consistent in the database
10. Only _____ should be allowed to access the database
11. A DBMS can _____ the database after a system failure to its previous condition
12. _____ are classifications that identify possible values and operations that can be done on data
13. _____ data type in DBMS supports numbers with or without fractional part
14. The full form of SQL is _____
15. The logical structure of data base is known as _____
16. The _____ data model is the most popular data model in DBMS
17. A _____ is a unit of work that is performed against a database
18. The _____ property of a DBMS enables transactions to operate independently of each other
19. _____ is composed of fields and contains data
20. The full form of RDBMS is _____

21. In a DBMS, a column or their combination used to identify one or more rows in a table is called as _____ of the tables
22. The full form of DDL is _____
23. The full form of DML is _____
24. The _____ command in DCL is used to remove access rights on a database object
25. _____ means that the data is accurate and consistent in the database.
26. _____ enables transactions to operate independently of and transparent to each other.
27. In RDBMS a database is considered as a collection of _____
28. Collection of rows and columns are called as _____
29. _____ link data from individual tables to increase the usefulness of the database.
30. _____ command creates a new table

True or False

1. Data could be either relevant or irrelevant
2. Privacy means only authorized users can access the database
3. A library management system extensively uses a DBMS
4. A DBMS can prevent redundancy of data
5. Sharing of data is not possible in a DBMS
6. Backup and recovery is not supported by DBMS
7. A DBMS can contain multiple databases
8. Remote users cannot access database simultaneously
9. Without data information can be processed
10. In social networking web sites, access constraints are different for different user accounts as per the user's requirement
11. Relational data model is widely used in the world
12. Columns are vertically shown in a table
13. Consistency means database does not change its state upon a successful transaction
14. It is important to control a DBMS transaction
15. Data does not help in decision making
16. Primary key uniquely maintains data in a column
17. The grant command is used to remove access rights on a database object
18. All RDBMS use SQL as their standard language

19. Data Security is a vital concept in a database.
20. Each row contains information on individual topics.

Choose SINGLE correct answer

1. The _____ command in DML is used to extract data from a table
 - SELECT
 - UPDATE
 - DELETE
 - INSERT INTO
2. The _____ command in DML is used to delete data from a table
 - SELECT
 - UPDATE
 - DELETE
 - INSERT INTO
3. The _____ command in DDL is used to delete a table
 - DROP TABLE
 - ALTER TABLE
 - CREATE TABLE
 - MODIFY TABLE
4. The _____ command in DML is used to insert data into a table
 - SELECT
 - UPDATE
 - INSERT
 - INSERT INTO
5. The _____ command in DDL is used to modify a table
 - CREATE DATABASE
 - ALTER TABLE
 - CREATE TABLE
 - MODIFY TABLE
6. _____ is used to control user access in a database
 - DDL
 - DML
 - DCL
 - SQL

7. In a _____ one record in a table is associated with only one record in another table
- One to one
 - One to many
 - Many to one
 - Many to many
8. _____ ensures that all operations within the work unit are completed successfully
- Atomicity
 - Consistency
 - Isolation
 - Durability
9. _____ ensures that the result of a committed transaction persists in case of a system failure
- Atomicity
 - Consistency
 - Isolation
 - Durability
10. The _____ data type holds a variable length string in a database
- CHAR
 - VARCHAR
 - INT
 - DATE
11. The _____ command in DDL is used to construct a database
- CREATE DATABASE
 - ALTER TABLE
 - CREATE TABLE
 - MODIFY TABLE
12. _____ is a language for storing, manipulating data in a RDBMS
- SQL
 - HTML
 - C++
 - Javascript

Answer the following

- I. Database
- II. DBMS
- III. Data integrity
- IV. Data privacy
- V. Transaction
- VI. RDBMS
- VII. Foreign key
- VIII. Primary key
- IX. SQL
- X. Field and record

Answer the following

- I. Explain the different types of relations in a DBMS
- II. What are the ACID properties of a transaction ?
- III. List and explain the different DML commands
- IV. What are the advantage of DBMS
- V. Differentiate between data and information
- VI. What are the text data types in a DBMS ?
- VII. What are the numeric data types in a DBMS ?
- VIII. What is a data model ?
