

CHAPTER- 3 IMPRESSIVE WEB DESIGNING

Question Bank

Q.1 FILL IN THE BLANKS

1. _____ stands for World Wide Web normally referred to as web.
2. _____ is a simple text file created using HTML.
3. _____ is a collection of interlinked web pages containing text, images, audio and videos.
4. A _____ is a software used to view web pages or websites available on the internet.
5. A _____ is an application or a computer that sends webpages over the internet using the HTTP protocol.
6. _____ is an address of a web page on the internet.
7. _____ is a protocol used by WWW for client server communication.
8. _____ enables to write code for a webpage.
9. An _____ defines a property for an element, consists of an attribute/value, and appears within the element's start tag.
10. _____ Tags are also called paired tags, Companion and terminating tags.
11. _____ are standalone tags and do not have an end tag.
12. _____ are also called as singular and nonterminating tags,
13. <Html> and </html> this tag indicates that the document is an _____ file.
14. _____ tag is used for search engine optimization.
15. The content within this tag is displayed on the _____ bar.
16. _____ tag includes all content which is to be developed in the web browser.
17. _____ is a document type declaration and it lets the browser know the flavour of HTML.
18. _____ tag defines a header for a document or a section.
19. _____ tag defines a container for navigation links.
20. _____ tag defines a section in a document.
21. _____ tag defines an independent self-contained article.
22. _____ tag defines content apart from the content (like a sidebar).
23. _____ tag defines a footer for a document or a section.
24. _____ tag defines additional details.
25. _____ tag Displays text within it in Bold like Hello.
26. _____ Displays text within it in italicized manner like Hello.

27. _____ Displays text with underline like Hello.
28. _____ tag displays text in small font size.
29. _____ tag displays text in subscript form.
30. _____ tag displays text in superscript form.
31. _____ tag is anything that appears within <ins>...</ins> element is displayed as inserted text.
32. _____ tag is anything that appears within ... element, is displayed as deleted text.
33. _____ tag is the HTML <mark> element defines marked or highlighted text:
34. _____ provides six levels of heading tags. The range is from 1 to 6.
35. _____ tag is used to insert an image within a webpage.
36. _____ is used to specify the path of an image file. The popular extensions of image file are png, jpg and gif.
37. _____ attribute of html 5.0 Specifies height of the image in pixels.
38. _____ attribute of html 5.0 Specifies width of the image in pixels.
39. _____ tag is referred as alternate text. It specifies the description of the image.
40. _____ tag is a singular tag used to display horizontal ruled line.
41. _____ attribute of html 5.0 <hr> tag Sets color for the horizontal ruled line.
42. _____ attribute of html 5.0 <hr> tag specifies the length of the ruled line in % or pixels.
43. _____ attribute of html 5.0 <hr> tag sets thickness of a ruled line.
44. _____ tag of html 5.0 is used to define paragraphs.
45. _____ tag of html 5.0 is a container tag.
46. To change the background color of the web page attribute is _____ used with <body> tag.
47. In HTML _____ number indicates color value.
48. To create paragraph in HTML _____ tag is used.
49. Color value indicated by hexadecimal number is prefixed by _____ mark.
50. _____ is unpaired tag in HTML 5.0
51. Default direction of marquee is _____.
52. _____ attribute of marquee tag specifies the number of times of marquee to scroll.

53. _____ value of behavior attribute makes marquee to slide through the web page.
54. The _____ tag is used to display enclosed text as superscript.
55. _____ attribute of tag specifies the colors to Text.
56. The greatest value that can be assigned to the size attribute of the tag is _____.
57. Comment in HTML is written with the help of _____.
58. _____ tag is used to create hyperlinks.
59. In table, heading is created by _____ tag.
60. _____ tag of table helps to insert the data into table.
61. _____ attribute of <Table> creates space between the cells.
62. _____ attribute of <Table> specifies the horizontal alignment of row and column.
63. _____ attribute of <td> specifies the number of rows that are spanned.
64. _____ attribute given color to the border of table.
65. _____ in HTML is used to accept user input.
66. The _____ in html is created by using <form> element as <form></form>.
67. A _____ is a collection of different elements also called as controls like textbox, radio button, checkbox, submit button and many more.
68. _____ attribute specifies a name to a form.
69. The _____ attribute specifies the path where the form is to be submitted.
70. The _____ attribute specifies get or post method to be used when submitting the form data.
71. The default method of submitting form data is _____.
72. The data submitted by using _____ is visible in the address bar.
73. The number of characters in _____ method depends on browser.
74. The _____ method of sending data does not display the form data in the address bar.
75. The _____ is used to create a textbox with multiple lines.
76. _____ specifies the maximum number of characters allowed in the textarea.

77. _____ specifies a short hint that describes the expected value of a textarea.
78. _____ specifies that textarea must be filled out.
79. _____ tag is used. to create drop-down list.
80. _____ attribute allows the user to select more than one value.
81. The _____ tag inside the <select> tag defines the available options in the list.
82. To define preselected option, ' _____ ' attribute is added to the <option>.
83. _____ is used to create a one-line textbox.
84. _____ is used to create a radio button.
85. _____ is used to creates a checkbox. It allows more than one selection against multiple choices.
86. _____ Displays a button for submitting the form data to a server.
87. _____ The password input type is used to create text contents in the form of '*' asterik or '•' disc.
88. _____ The reset control clears the text content entered in the form.
89. _____ It displays push button which activates on events.
90. _____ attribute describes, the name of the control like text radio etc.
91. A _____ is a list of commands but are executed by a scripting engine.
92. _____ are used to generate dynamic web pages on the web.
93. _____ can be opened and edited by using a text editor.
94. _____ can be used for client side or server side scripting language.
95. _____ Code can be inserted in HTML program between <script> and </script> tag.
96. The _____ is a basic unit of storage in a JavaScript program.
97. Numerical value specially belongs to the _____ data type.
98. _____ are used for storing text.
99. _____ must be inside of either double or single quotes.
100. _____ represents only two values 'true' and 'false'.
101. In _____ null is just a value which means "nothing", "empty", "unknown".
102. JavaScript returns _____ when variable which is declared but not assigned.

103. _____ are used to do arithmetic and logical operations.
104. In JavaScript __ operator has two meanings, arithmetic addition and string concatenation operator.
105. _____ are used to check conditions or comparison of operands.
106. _____ are used to verify more than one condition at a time or to negate the condition.
107. _____ in JavaScript is used to increment value of variable by one.
108. _____ in JavaScript is used to decrement value of variable by one.
109. _____ are non-executable statements in program.
110. Comments are used to provide _____ or explanation about your programming construct.
111. A _____ in any scripting and programming languages is small part of program that we require again and again.
112. A function is a _____ designed to perform a particular task.
113. _____ can be called either by an event or by giving call to that function.
114. _____ is an event-driven language.
115. JavaScript lets you execute a code when events are detected. You can respond to any event using an _____.
116. _____ is a scripting language which can be used to develop dynamic webpages.
117. if, if...else, are control statements in _____.
118. _____ supports different types of operators such as arithmetic (+,-,*,/,%), relational (<,>,<=,>=,==), logical (&&,|,!) etc.
119. _____ supports built-In functions like parseInt(), parseFloat(), prompt(), confirm(), alert() etc.
120. _____ supports user defined functions also that can be called either by an event or by giving call to that function.

Q2. State true or false.

1. HTML is system programming language.
2. The <TITLE> tag is always placed inside the <Body> tag.
3. HTML code is not case sensitive.
4. Tag symbol < > is utilized at the start of each HTML programming step.
5. <BODY> tag is used define body or lookup of webpage.
6. Background attribute is used with <body>.

7. The greatest value for SIZE attribute of tag is 7.
8. The <HR> tag draws horizontal line across the text.
9. <sub> is used for superscript.
10. <marquee> tag is used for scrolling.
11. <tr> is used to create header row.
12. The NAME attribute allow linking within the same page.
13. Cellspacing attribute controls the spacing between adjacent cells.
14. WWW stands for World Wide Web normally referred to as web.
15. Webpage is a simple text file created using HTML.
16. Website is a collection of interlinked web pages containing text, images, audio and videos.
17. A Web browser is a software used to view web pages or websites available on the internet.
18. A Web server is an application or a computer that sends webpages over the internet using the HTTP protocol.
19. URL (Uniform Resource Locator) is an address of a web page on the internet.
20. HTTP (Hypertext Transfer Protocol) is a protocol used by WWW for client server communication.
21. Hyper Text Markup Language enables to write code for a webpage.
22. Container Tags are also called paired tags, Companion and terminating tags.
23. Empty tag are standalone tags and do not have an end tag.
24. Empty tag are also called as singular and nonterminating tags.
25. <Html> and </Html> this tag indicates that the document is an html file.
26. <Head> tag is used for search engine optimization.
27. The content within this tag is displayed on the title bar.
28. <Body> tag includes all content which is to be developed in the web browser.
29. <!DOCTYPE html> is a document type declaration and it lets the browser know the flavour of HTML.
30. <Header> tag defines a header for a document or a section.
31. <Nav> tag defines a container for navigation links.
32. <Article> tag defines a section in a document.
33. <Article> tag defines an independent self-contained article.
34. <Aside> tag defines content apart from the content (like a sidebar).
35. <Footer> tag defines a footer for a document or a section.
36. <Details> tag defines additional details.
37. tag Displays text within it in Bold like Hello.
38. <i> Displays text within it in italicized manner like Hello.
39. <u> Displays text with underline like Hello.
40. <Small> tag displays text in small font size.
41. <Sub> tag displays text in subscript form.
42. <Sup> tag displays text in superscript form.
43. <ins> tag is anything that appears within <ins>...</ins> element is displayed as inserted text.
44. tag is anything that appears within ... element, is displayed as deleted text.
45. <Mark> tag is the HTML <mark> element defines marked or highlighted text.

46. HTML provides six levels of heading tags. The range is from 1 to 6. tag is used to insert an image within a webpage.
47. Source is used to specify the path of an image file.
48. Height attribute of html 5.0 Specifies height of the image in pixels.
49. Width attribute of html 5.0 Specifies width of the image in pixels.
50. Alt tag is referred as alternate text. It specifies the description of the image.
51. <Hr> tag is a singular tag used to display horizontal ruled line.
52. Color attribute of html 5.0 <hr> tag Sets color for the horizontal ruled line.
53. Width attribute of html 5.0 <hr> tag specifies the length of the ruled line in % or pixels.
54. Size attribute of html 5.0 <hr> tag sets thickness of a ruled line.
55. <P> tag of html 5.0 is used to define paragraphs.
56. <P> tag of html 5.0 is a container tag.
57. To change the background color of the web page attribute is Bgcolour used with <body> tag.
58. In HTML Hexadecimal number indicates color value.
59. To create paragraph in HTML <P> tag is used.
60. Color value indicated by hexadecimal number is prefixed by # mark.
61.
 is unpaired tag in HTML 5.0.
62. Default direction of marquee is Right to Left.
63. Loop attribute of marquee tag specifies the number of times of marquee to scroll.
64. Slide value of behavior attribute makes marquee to slide through the web page.
65. The <Sup> tag is used to display enclosed text as superscript.
66. Color attribute of tag specifies the color to Text.
67. The greatest value that can be assigned to the size attribute of the tag is 6.
68. Comment in HTML is written with the help of <!-->.
69. <a> tag is used to create hyperlinks.
70. In table, heading is created by <th> tag.
71. <td> tag of table helps to insert the data into table.
72. Cellspacing attribute of <Table> creates space between the cells.
73. Align attribute of <Table> specifies the horizontal alignment of row and column.
74. Rowspan attribute of <td> specifies the number of rows that are spanned.
75. Bordercolor attribute given color to the border of table.
76. Forms in HTML is used to accept user input.
77. The form in html is created by using <form> element as <form></form>.
78. Name attribute specifies a name to a form.
79. The action attribute specifies the path where the form is to be submitted.
80. The method attribute specifies get or post method to be used when submitting the form data. True
81. The default method of submitting form data is POST. False
82. The data submitted by using GET is visible in the address bar. True
83. The number of characters in GET method depends on browser. True
84. The POST method of sending data does not display the form data in the address bar.
85. The <textarea> is used to create a textbox with multiple lines.

86. Maxlength specifies the maximum number of characters allowed in the textarea.
87. Placeholder specifies a short hint that describes the expected value of a textarea.
88. Required specifies that textarea must be filled out.
89. <select> tag is used. to create drop-down list.
90. Multiple attribute allows the user to select more than one value.
91. The <option> tag inside the <select> tag defines the available options in the list.
92. To define preselected option, 'selected' attribute is added to the <option>.
93. <Input type = "text"> is used to create a one-line textbox.
94. <Input type = "radio"> is used to create a radio button.
95. <Input type = "submit"> Displays a button for submitting the form data to a server.
96. <Input type = "password"> The password input type is used to create text contents in the form of '*' asterisk or '•' disc.
97. <Input type = "reset"> The reset control clears the text content entered in the form.
98. <Input type = "button"> It displays push button which activates on events.
99. Type attribute describes, the name of the control like text radio etc.
100. Strings are used for storing text.
101. Scripts cannot be opened and edited by using a text editor.
102. Numerical value specially belongs to the 'number' data type.
103. Relational Operators are used to verify more than one condition at a time or to negate the condition.
104. Comments are executable statements in program.
105. JavaScript is an event-driven language.
106. Web Browser is used to view web pages or websites on the internet.
107. <td> is used to create each row of the table.
108. Variables are the basic units of storage.
109. A Script is a list of commands but are executed by a scripting engine.
110. Scripts are used to generate dynamic web pages on the web.
111. Scripts can be opened and edited by using a text editor.
112. Javascript can be used for client side or server side scripting language.
113. Javascript Code can be inserted in HTML program between <script> and </script> tag.
114. The Variable is a basic unit of storage in a JavaScript program.
115. Numerical value specially belongs to the Number data type.
116. Strings are used for storing text.
117. Strings must be inside of either double or single quotes.
118. Boolean Type represents only two values 'true' and 'false'.
119. In Javascript null is just a value which means "nothing", "empty", "unknown".
120. JavaScript returns Undefined when variable which is declared but not assigned.
121. Operator are used to do arithmetic and logical operations.
122. In JavaScript + operator has two meanings, arithmetic addition and string concatenation operator.
123. Relational operators are used to check conditions or comparison of operands.
124. Logical operators are used to verify more than one condition at a time or to negate the condition.
125. Increment (++) operator in JavaScript is used to increment value of variable by one.

126. Decrement in JavaScript is used to decrement value of variable by one.
127. Comments are non-executable statements in program.
128. Comments are used to provide Information or explanation about your programming construct.
129. A Function in any scripting and programming languages is small part of program that we require again and again.
130. A function is a Subprogram designed to perform a particular task.
131. Functions can be called either by an event or by giving call to that function.
132. Javascript is an event-driven language.
133. JavaScript lets you execute a code when events are detected. You can respond to any event using an Event handler.
134. Javascript is a scripting language which can be used to develop dynamic webpages.
135. if, if...else, are control statements in JavaScript.
136. JavaScript supports different types of operators such as arithmetic (+,-,*,/,%), relational (<,>,<=,>=,==), logical (&&,||,!) etc.
137. Javascript supports built-In functions like parseInt (), parseFloat (), prompt (), confirm (), alert () etc.
138. Javascript supports user defined functions also that can be called either by an event or by giving call to that function.
139. JavaScript is a platform independent language.
140. Relational operators are used to check conditions or comparison of operands.

Q3 Choose the correct single alternative

1. Largest heading tag in HTML is _____.
 - a. <H7>
 - b. <H1>
 - c. <H6>
 - d. <heading>
3. The most commonly used name for default page of web site _____.
 - a. Front Page
 - b. Home Page
 - c. First Page
 - d. Web Page
4. Value of behavior attribute of the <marquee> tag in HTML is _____.
 - a. Scrolling
 - b. Alternative
 - c. Slide
 - d. Move
5. <Title> tag is used inside _____ tag.
 - a. <Head>
 - b. <body>
 - c. Outside the <body> tag
 - d. None
6. To insert Line break _____ tag is used.
 - a. <break>
 - b. <bk>
 - c.

 - d. <Line break>
7. To Insert Image as a background on web page _____ is used.
 - a. <bgImg>
 - b. <bgcolour>
 - c.
 - d. <background>

8. To insert Image on web page _____ tag is used.
- a. b. <background> c.<Image> d. <Begin>
9. _____ attribute of the <table> element allows the user to specify the space between the cells of the table.
- a. Cell border b. Cellpadding c. Cellspacing d. Both (a) and (b)
10. _____ tag is used to represent individual column headings of a table.
- a. <tr> b.<td> c. <th> d. <cd>
11. The text enclosed in _____ and _____ will be displayed in superscript form.
- a. _, b. [,] c. <a>, d.,
12. _____ tag is used to display text in preformatted form. <pre>
- a. <pre> b. <format>c. d. <preformatted>
13. _____ element is used as subscript of the text.
- a. b. c. Both of them d. None of the above
14. _____ tag is used to bold the text.
- a. <big> b. c. <u> d. <bold>
15. _____ is valid value for behavior attribute of <MARQUEE> tag.
- a. slide b. scrolling c. href d. Alternative
16. Default direction of marquee tag is _____.
- a. left to right b. right to left c.top to bottom d. bottom to top
17. Marquee tag has the following _____ attributes.
- a. behavior b. direction c. position d. both a and b
17. _____ function to check given value is number or not.
- a. isNaN () b. alert() c. prompt() d. confirm()
18. Variable keyword in javascript is declared with the keyword _____.
- a. Variable b. Variant c. Value d. Var

19. The _____ are used to store text in JavaScript.

- a. Character b. String c. Number d. Boolean

20. The _____ type represent value true or false.

- a. Boolean b. Character c. String d. Number

21. The _____ logical operator evaluates to true only when all its operands are true.

- a. && (and) b. || (OR) c. ! (Not) d. != (Not equal to)

22. _____ name in JavaScript consist of digits, Number and Underscore.

- a. Operators b. Datatype c. Variable d. Functions

23. _____ are non-executable statements in JavaScript programs.

- a. Condition b. Comments c. Documentation d. Operator

24. The _____ function display alert box () with OK button.

- a. Prompt () b. alert () c. box () d. confirm ()

25. The _____ keyboard event occurs when user presses a key in javascript.

- a. onKeyDown b. onkeyRelease c. onkeyUp d. OnClick

26. This function_____ is used to parse Example Output a string and convert it into a number.

- a. parseFloat () b. prompt () c. confirm () d. parseInt ()

27. This function _____ is used to parse a Example Output string and convert it into floating point representation.

- a. parseFloat () b. prompt () c. confirm () d. parseInt ()

Q.4 Choose Correct Double Alternatives (Marks-5)

1. Rules to declare variable are _____ and _____.

- a. Must start with alphabets b. 255 character limit
c. Blank spaces allowed d. Keywords allowed

2. Script can be placed in tags _____ and _____.

- a. <html> b. <head> c. <Title> d. <body>

3. Features of JavaScript are _____ and _____.

a. Data Validation b. Case Sensitive c. Time Consuming d. Static Language

4. _____ and _____ are logical operators in JavaScript.

a. Prompt b. && c. Alert d. ||=

5. _____ and _____ are relational operators in JavaScript.

a. && b. == c. >= d. ||=

6. _____ and _____ are data types in JavaScript

a. String b. Boolean c. Selected d. Checked

7. _____ and _____ are built in function in JavaScript.

a. Alert () b. Prompt () c. Confirm () d. isNaN ()

8. _____ and _____ are event handler in JavaScript.

a. onClick b. onMouseUP c. Alert d. Prompt

Q.5 Answer the Following (Marks-5)

1. State the components of web.

2. Name and explain basic tags and their attributes.

3. Distinguish between Container tag and empty tag.

4. State the purpose of basic tags for structure of HTML 5.0.

5. Name and explain semantic tags.

6. Name and explain Text formatting element.

7. State the attributes of and <HR> tag.

8. Name and explain different tags and attributes of <Table> tag.

9. Name and explain different tags and attributes of <Form> tag.

10. Explain Client Side Scripting

11. State the rules to declare variable in JavaScript.

12. Explain Relational and Logical Operators in JavaScript.

13. Explain Comments in JavaScript

14. Explain Built in functions in JavaScript.

15. Explain Event handler in JavaScript

-END-
